45	Lung Cancer	77	Male	ADC	2	T2a N0 Mx	No
46	Lung Cancer	75	Male	ADC	3	T1b N2 Mx	No

* ADC: adenocarcinoma

* LUSC: lung squamos carcinoma

* G1, G2 and G3: Grade 1, 2 and 3

* N0, N1 and N2: adenopaties affection

* Mx: no metastasis were seen by the pathologist

SVC: superior vena cava

CABG: coronary artery bypass graft

SUPPLEMENTARY LEGENDS

Supplementary Figure S1. EVs characterization. (A) Cropped immunoblot against TSG101 and CD9 in representative samples of EVs isolated from the pleural lavage of two lung cancer patients. (B) Box-plot representing the average mode of EVs isolated from the pleural lavage and fluid of lung cancer and control patients, respectively (Mean \pm SD); measured by Nanoparticle Tracking Analysis. (C) Electron microscopy image of EVs isolated from pleural liquid of a control patient. (D) Size distribution and concentration of isolated EVs of a pleural lavage of a lung cancer patient (left) and a pleural fluid of a control patient (right), measured by Nanoparticle Tracking Analysis.

Supplementary Figure S2. Box-plots of all the differentially expressed miRNAs. Box-plots of the 14 miRNAs that were significantly dysregulated in EVs from the pleural lavage of lung cancer patients ($n=14$) compared to the pleural fluid of control patients ($n=20$).

Supplementary Table S1. Clinicopathological characteristics of all patients. Clinical characteristics of the total cohort of patients recruited in the study.
