Table S1 Univariate Cox regression model for the association of ct-miRNA level changes and Event-Free Survival

Difference log2RQ (we2-bas)	HR	95% CI		p value log Rank test*	n. of events
ct-miR-148a-3p (n=50)	0.75	0.41	1.38	0.57	16
ct-miR-374a-5p (n=39)	1.35	0.67	2.7	0.66	11

HR: Hazard ratio; CI: confidence interval

* Dichotomizing the difference log2RQ (week 2-baseline) of miR-148a-3p and 374a-5p by using as threshold the upper limit of the 95% confidence interval of the mean difference.
