**ST2.** Association of SNPs, circulating ApoE and ApoJ levels, and demographic variables with CAA-MRI common features. The data displayed are unadjusted p-values. cSS: cortical Superficial Siderosis; distr.: distribution; EPVS: Enlarged Perivascular Spaces; BG: Basal Ganglia; CSO: Centrum Semiovale; BG: Basal Ganglia; CMB: Cerebral Microbleedings; WMH: White Matter Hyperintensity; PV: periventricular. MA: Minor Allele

## Supplemental Figure 1

**SF1.** Genotype frequency of the SNPs associated with the CAA-SVD burden score using the additive model. The genetic risk factor associated with a higher score is represented in darker grey, whereas the protective factor is represented in lighter grey. Genotype frequency is expressed as a percentage in each category of the score (0-6).
