

Figure, Supplemental Digital Content 1. Disease-free survival curves among Stages I and II patients showing A) no significant differences between patients with Bd3 and Bd1 or Bd2; B) worse disease-free survival for patients with PDC G3 than for patients with PDC G1 or PDC G2; C) no significant differences for patients with TTL $\geq 6,000$ copies/ μL . TB: Tumour budding; H&E: haematoxylin and eosin; PDC: poorly differentiated clusters; TTL: total tumour load.
