## INTRODUCCIÓ

La *International Classification of Diseases (ICD)*, elaborada per l'Organització Mundial de la Salut (OMS), va donar un pas històric destacable amb la 9a revisió (ICD-9) en adoptar una classificació de procediments publicada, fins aleshores, en una sèrie de suplementos.

Posteriorment, el govern dels Estats Units d'Amèrica (EUA) va dur a terme la modificació clínica de la ICD-9, que va donar lloc a la *International Classification of Diseases, 9th revision, Clinical Modification (ICD-9-CM)*. El mot «clínica» posa èmfasi en el propòsit de la modificació: ser una eina útil tant en l'àrea de les classificacions de les dades de morbiditat per a l'ordenació de les històries clíniques, la revisió de l'atenció mèdica i els programes d'atenció ambulatoria i d'altres tipus, com en l'elaboració d'estadístiques bàsiques de salut. Aquesta modificació també es va orientar a facilitar una major precisió en la descripció dels quadres clínics, tot afegint-hi un quart i un cinquè dígit als codis per augmentar, així, l'especificitat de la classificació.

L'OMS, per la seva banda, l'any 1993 va implantar la desena revisió (ICD-10), que va suposar una ampliació de la ICD-9, els codis van passar a ser alfanumèrics i es va constituir en el nucli central de la *WHO Family of International Classifications (WHO-FIC)*.

En els darrers anys, ateses les limitacions de l'estructura de la ICD-9-CM (que inclou tant codis de malalties com de procediments) per a la seva actualització i ampliació, d'acord amb una major necessitat de detall i d'incorporació de nova terminologia, el govern dels EUA ha desenvolupat la modificació clínica de la ICD-10, que ha donat lloc a la *International Classification of Diseases, 10th revision, Clinical Modification (ICD-10-CM)* i al *ICD-10 Procedure Coding System (ICD-10-PCS)*, que són els estàndards de codificació en aquell país des de l'octubre de 2015.

Aquestes noves eines de codificació representen una millora significativa de la ICD-9-CM. Pel que fa a les malalties (es passa de 16.019 codis a 93.830): s'afegeix informació rellevant per a l'atenció ambulatoria, s'amplien els codis de lesions, es creen combinacions de codis de símptomes i diagnòstics per reduir el nombre de codis necessaris per descriure una afectació de manera completa, s'afegeixen un sisè i setè caràcters i s'incorpora la lateralitat als codis susceptibles. D'altra banda, la nova estructura permet l'expansió futura de la classificació.

Pel que fa als procediments (es passa de 4.646 a 76.646): canvia completament l'estructura del codi, tots tenen set caràcters, i els codis es construeixen a partir d'uns valors mitjançant algoritmes formats per diverses taules. És una classificació exhaustiva (cada procediment té el seu codi), expandible (l'estructura permet la inclusió de nous codis), multiaxial (la posició de cada dígit té un significat propi segons la secció) i incorpora una terminologia estandarditzada (definicions precises, cada terme té un significat específic).

Aquesta segona edició de la [\*Classificació internacional de malalties, 10 revisió, Modificació clínica/Sistema de codificació de procediments \(CIM-10-MC/SCP\)\*](#) és la traducció de la versió original americana i conté els codis vigents per a l'any fiscal americà 2017. A Catalunya, com a la resta de l'Estat espanyol, a partir de l'1 de gener de 2018, serà el nou estàndard de codificació per a la notificació de l'activitat que es du a terme als centres sanitaris, sociosanitaris, de salut mental, dels serveis d'urgències hospitalaris i centres atenció primària.

Per tal de facilitar la implantació d'aquesta nova classificació, s'ha elaborat una oferta formativa amb professionals de documentació sanitària i s'estan desenvolupant eines d'ajuda a la codificació.

L'estructura i l'ús de la CIM-10-MC es descriuen en diversos documents que es poden descarregar des del [web del CatSalut](#).

## TAULA DE FÀRMACS I SUBSTÀNCIES QUÍMIQUES CIM-10-MC

Substància	Intoxicació, accidental (no intencionada)	Intoxicació, autolesió intencionada	Intoxicació, agressió	Intoxicació, intenció no determinada	Reacció adversa	Infradosificació
14-hidroxi-dihidromorfinona	T40.2X1	T40.2X2	T40.2X3	T40.2X4	T40.2X5	T40.2X6
1-propanol	T51.3X1	T51.3X2	T51.3X3	T51.3X4	--	--
2,4,5-T (àcid triclorofenoxiacètic)	T60.1X1	T60.1X2	T60.1X3	T60.1X4	--	--
2,4-D (àcid diclorofenoxiacètic)	T60.3X1	T60.3X2	T60.3X3	T60.3X4	--	--
2,4-diisocianat de toluè	T65.0X1	T65.0X2	T65.0X3	T65.0X4	--	--
2-propanol	T51.2X1	T51.2X2	T51.2X3	T51.2X4	--	--
8-aminoquinolina, fàrmacs de la seva família	T37.2X1	T37.2X2	T37.2X3	T37.2X4	T37.2X5	T37.2X6
abella (picada) (verí)	T63.441	T63.442	T63.443	T63.444	--	--
